

LAW OF BIOGENESIS

In 1668, an Italian physician, named Francesco Redi, disproved the idea of spontaneous generation.

Louis Pasteur 1822-'95

Scientists have been researching this subject for thousands of years and even Aristotle tried to find proof for it, well over two thousand years ago.

In 1859 Louis Pasteur experimented with the idea of spontaneous generation.

At last Pasteur formulated the Law of Biogenesis, as he came to the final conclusion from his experiments that only life can produce life.

His tests and findings have been contradicted and ridiculed, because the 'Law of Biogenesis' does not fit the evolution thought pattern of spontaneous generation. It is criticized because of 'advances in germ theory and cell theory'.

All these criticisms come from theories, but no scientific experiment, not one, has proven the 'Law of Biogenesis' wrong."

Pasteur said,

"La génération spontanée est une chimère."

"Spontaneous generation is a fantasy."

He was so convinced that he was right, that he stated,

"Never will the doctrine of spontaneous generation recover from the mortal blow struck by this simple experiment."
